

Current episode and history of homelessness

BACKGROUND AND NOTES ON THE 2006 TABLES FOR ADULTS WITH OR WITHOUT CHILDREN

These tables provide detailed survey results from the October 2006 *Statewide survey of people without permanent shelter*. The data are provided to help planners and service providers develop summary information about the characteristics of homeless people, their experiences and needs, and the barriers that prevent them from obtaining housing. For an overview of survey results, see the report *Overview of homelessness in Minnesota 2006: Key facts from the statewide survey* posted on the Wilder Research web site (wilderresearch.org). Other reports will be posted there as they are available.

The statewide data tables are based on interviews with 1,174 men and 1,270 women in emergency shelters, battered women's shelters, and transitional housing programs, and another 1,138 interviews with adults in non-shelter locations. According to the interviews, our sample of adult respondents had a total of 1,948 children with them.

In the data tables, survey results have been weighted to represent the 1,783 men and 1,860 women who were in temporary housing programs on the night of the survey. According to shelter providers, 2,501 children were with their parents or another adult on the night of the survey.

NOTES FOR INTERPRETING THE DATA TABLES

The tables contain weighted estimates. This means that the survey results have been statistically adjusted to reflect the actual populations residing in emergency shelters, battered women's shelters, and transitional housing programs on the day of the survey. (We interviewed a sample, not every person in each shelter.)

For non-shelter locations, the data are not weighted.

We do not adjust the numbers for non-sheltered respondents, because the actual numbers of men, women, and children on the streets or in non-shelter locations on the day of the survey is unknown.

You should use the percentages, not the frequencies, when interpreting these tables. Sample weighting, such as we have performed with these data, uses calculations that can result in "fractional" persons. When we use computer rounding to adjust for this, the numbers do not always add up exactly to the total for each category.

The total number of responses is different for each question, based on the number of valid responses to that question. Missing data (cases when a respondent did not answer a question) are not reported or included in the percentages.

Not all Continuum of Care regions have all categories of shelters. That is why some shelter types are missing in certain regional reports.

Unaccompanied homeless youth (under 18) are not included in these tables. They will be included in a separate report and tables when available.

The percentages apply only to the respondents who were qualified to answer that question. Some tables report data that were collected only from those who answered a previous question in a certain way. For example, many questions about children are asked only of those adults who have children with them, so the percentages apply only to that group.

The Metro region includes the following seven counties: Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington.

WEIGHTING TECHNIQUES

The 2006 survey data were weighted to reflect the actual number of sheltered homeless persons, as indicated by specific site counts of people in shelters throughout the state on October 26, 2006. Only sites from which there were completed interviews were used in the weighting. The actual number of homeless persons in non-sheltered locations cannot be accurately estimated, so these cases were given a weight of 1.0.

The weightings were calculated by a sample-balancing program available in the Princeton Statistical Program (P-Stat). Individual case weights were computed based on:

- Individual sites.
- Gender (male, female).
- Region (northwest, northeast, central, west central, southwest, southeast, Anoka, Dakota, Hennepin, Scott/Carver, Washington, Ramsey, St. Louis County).
- Shelter type (emergency, transitional, battered women's shelter).

Weightings were used to estimate the characteristics of homeless persons in Minnesota's temporary housing programs on the night of the survey based on the sample of 2,444 interviews with adults. The actual number of adults in temporary housing programs on the night of the survey was 3,643. When this is combined with the results of the 1,138 interviews completed with adults in non-shelter locations, the total sample for which estimates are available is 4,781.

For more detailed information about sampling or weighting procedures, please refer to the full 2003 report, *Homeless adults and children in Minnesota 2003*, or contact the research staff at homelessstudy@wilder.org. Details will also be available in the 2006 technical report when it is completed and posted on this web site (wilderresearch.org).
