# Introduction

In April through July 2010, nearly 9,000 adults who live in Southwest and South Central Minnesota were surveyed about their general health status, chronic health conditions, nutrition, physical activity, tobacco use, and related topics. This survey was initiated by eight public health agencies in the region that represent 19 counties: Blue Earth County; Brown-Nicollet Community Health Board; Cottonwood-Jackson Community Health Service; Countryside Public Health (Big Stone, Chippewa, Lac qui Parle, Swift, and Yellow Medicine Counties); Kandiyohi County Public Health; Le Sueur-Waseca Community Health Board; Lincoln, Lyon, Murray, Pipestone Public Health Services; and Redwood-Renville Community Health Services.

This study was funded by the Minnesota Department of Health's Statewide Health Improvement program (SHIP). Wilder Research was contracted to conduct the survey. Staff from the Minnesota Department of Health (MDH) provided technical assistance in design, administration, and analysis.

## Methods

A total of 1,600 people in Kandiyohi County were invited to participate and 426 completed a survey, for a response rate of 26.6 percent, which results in a sampling error of less than +/-4.7 percent. The survey was conducted by mail; each potential respondent received up to two reminders following the initial mailing.

Survey respondents are representative of the adult population of Kandiyohi County. Post-stratification weighting was used, based on gender and age, to ensure representativeness. More detailed information about the study methods and the survey instrument are included in the Appendix.

## How to use this data book

This data book provides the detailed survey results for the residents of Kandiyohi County. Each table includes the results for one survey question. In each table, the overall results for Kandiyohi County are reported, along with results for sub-groups in the population. The results are reported by gender, age, location, education, and income. For comparison purposes, the results for the Community Health Board (CHB) service area (Kandiyohi County is served by Kandiyohi county Public Health) and the 19-county region are also reported. Cells that have fewer than 30 cases are suppressed and denoted with a “\*.”

## ***Detailed study methodology***

### ***Southwest/South Central Adult Health Survey Methodology***

#### **Study design**

Wilder Research conducted self-administered and telephone surveys with a random sample of adult residents in Big Stone, Blue Earth, Brown, Chippewa, Cottonwood, Jackson, Kandiyohi, Lac qui Parle, Le Sueur, Lincoln, Lyon, Murray, Nicollet, Pipestone, Redwood, Renville, Swift, Waseca, and Yellow Medicine Counties. This study was designed to obtain data on health risk behaviors and the health status of adults in the study area to: help participating agencies set priorities for new initiatives; assess the needs of specific populations; provide evidence to support policies, legislative actions, and environmental and systems changes; provide county-level data to support future grant applications; and increase public awareness of health issues.

#### **Sample**

An address-based sample of 38,000 residents (2,000 per county) was purchased from Marketing Systems Group, a national sampling vendor. An address-based sample was chosen so that all households have an equal chance of being sampled for the study regardless of their cell phone or landline phone status. Marketing Systems Group obtained the list of addresses from the U.S. Postal Service. The “most recent birthday” method of within-household respondent selection was used to ensure that every adult in sampled households had an equal chance of being surveyed.

#### **Survey instrument**

Representatives of the participating public health agencies developed a survey instrument that addressed the research questions. Technical assistance was provided by a research scientist from the Minnesota Department of Health Center for Health Statistics. Existing items from the Behavior Risk Factor Surveillance System (BRFSS) and other Minnesota statewide surveys were used to design some of the items on this new survey. The survey was formatted as a self-administered questionnaire. The survey was not translated into any other languages. It was only conducted in English.

#### **Data collection protocol**

An initial survey packet was sent to all sampled households that included a cover letter, survey instrument, and a postage-paid return envelope. Respondents who were mailed a survey were also given the option to call Wilder Research and complete the survey over

the phone. The first 30,400 (1,600 per county) survey packets were mailed on April 19, 2010. We received 4,032 completes within the first two weeks.

Two weeks after the first survey packets went out a reminder postcard was sent to those who had not completed and returned a survey. The reminder postcards were sent to 26,368 households on May 3, 2010. We received 1,706 completes in the following two weeks.

Two weeks after the reminder postcard (and one month after the initial mailing) another full survey packet was sent to all respondents who had not completed and returned the survey. We sent 24,662 full survey packets to households who had still not completed the survey on May 17, 2010. The remaining 3,085 completes were received over the next six weeks with the final cut off date for surveys being June 30, 2010.

### **Incentives**

Respondents who completed the survey were entered into a drawing for a \$25 grocery gift card. Four winners from each county were randomly selected to receive a gift card. Information for the winners was provided to the client and they distributed the gift cards.

### **Completed surveys and other final dispositions**

We received completed surveys from 8,823 households. The overall response rate was 29 percent. See Figure 1 for response rate by county.

### **Data cleaning and analysis**

Surveys were coded and scanned electronically by Adapt, Inc., in Minnetonka, Minnesota. The scanned data was transferred to the data analysis staff at Wilder Research for further verification and cleaning. Completed surveys were coded and checked for completion and accuracy. Only project coordinators, research assistants, and interviewers trained by the project manager worked on the proofing and coding for this study.

To ensure that the survey data are representative of the population of adults living in the participating counties, the data were adjusted using post-stratification weighting based on age and gender (i.e., the survey data were corrected so that the gender and age of the survey respondents mirrors the gender and age of the adult population). The data were weighted against U.S. census bureau 3-year estimates (2006-2008) for each county. The number of adults in the household and the total number of households in each county were also accounted for using “design weighting” (i.e., to reflect each individual adult’s chances of being sampled for the survey).

Now we have a couple of questions about how you spend your time. One question is about TV use and the next is about computer use.

- C2. On average, how many hours or minutes per day do you use your TV to watch programs or movies, or play video games?

Hours per day OR  Minutes per day

- C3. On average, how many hours or minutes per day do you use a computer for reading, playing games, surfing the Internet, or watching programs or movies while not at work or school?

Hours per day OR  Minutes per day

- C4. During the past 30 days, other than your regular job, did you participate in any physical activities or exercises such as running, aerobics, golf, gardening, or walking for exercise?

☐ Yes ☐ No

We are interested in two types of physical activity - vigorous and moderate. Vigorous activities cause large increases in breathing or heart rate while moderate activities cause small increases in breathing or heart rate.

- C5. Now, think about the moderate activities you do when you are not working. In a usual week, do you do moderate activities for at least 10 minutes at a time, such as brisk walking, bicycling, vacuuming, gardening, or anything else that causes some increase in breathing or heart rate?

☐ Yes ☐ No ➡ IF NO, GO TO QUESTION C8

- C6. How many days per week do you do these moderate activities for at least 10 minutes at a time?

☐ ☐ ☐ ☐ ☐ ☐ ☐  
1 2 3 4 5 6 7 days

- C7. On days when you do moderate activities for at least 10 minutes at a time, how much total time per day do you spend doing these activities?

Hours per day OR  Minutes per day

- C8. Now, think about the vigorous activities you do when you are not working. In a usual week, do you do vigorous activities for at least 10 minutes at a time, such as running, aerobics, heavy yard work, or anything else that causes large increases in breathing or heart rate?

☐ Yes ☐ No ➡ IF NO, GO TO SECTION D, NEXT PAGE

- C9. How many days per week do you do these vigorous activities for at least 10 minutes at a time?

☐ ☐ ☐ ☐ ☐ ☐ ☐  
1 2 3 4 5 6 7 days

- C10. On days when you do vigorous activities for at least 10 minutes at a time, how much total time per day do you spend doing these activities?

Hours per day OR  Minutes per day

## SECTION D. YOUR LOCAL AREA

**D1. Overall, how would you rate the area around your home as a place to walk?**

- ☐ Very pleasant
- ☐ Somewhat pleasant
- ☐ Not very pleasant
- ☐ Not at all pleasant

**D2. For walking in the area around your home, would you say your sidewalks are:**

- ☐ Very well maintained
- ☐ Somewhat maintained
- ☐ Not very well maintained
- ☐ Not at all maintained
