Information. Insight. Impact.

Acknowledgements

Wilder Research and the City of Minneapolis Neighborhood and Community Relations Department would like to thank the following individuals and departments from the City of Minneapolis who helped to revise the survey:

311: Trish Glover and Diane Nelson

911: Heather Hunt

Civil Rights: Velma Korbel

City Coordinator: Spencer Cronk and Joy Marsh Stephens

Communications: Brigitte Bornstein and Cheryl Boe

CPED: Craig Taylor

Fire: John Fruetel

Health: Gretchen Musicant

HR: Patience Ferguson

IT: Otto Doll and Elise Ebhardt

Police: Janee Harteau

Public Works: Steve Kotke

Regulatory Services: Noah Schuchman

We would also like to thank the City of Minneapolis core study team, who provided guidance and oversight on all aspects of this study:

Donald Joseph

Christina Kendrick

Kim Keller

Andrea L. Larson

Jodi L. Molenaar-Hanson

Nuria Rivera-Vandermyde

David Rubedor

Laurelyn Sandkamp

Michael Yang

The Wilder Research staff who contributed to this project include:

Mark Anton

Amanda Eggers

Steven Aviles

Hollis Henry

Barry Bloomgren, Jr.

April Lott

Jennifer Bohlke

Ryan McArdle

Walker Bosch

Margie Peterson

Cheryl Bourgeois

Miguel Salazar

Marilyn Conrad

Dan Swanson

Phil Cooper

Pa Nhia Yang

Finally, we would like to thank the City of Minneapolis residents who participated in this survey.

Data collection

Survey instrument design

Staff from Wilder Research and the City of Minneapolis Neighborhood and Community Relations Department (NCR) developed the survey in 2016. In developing a new survey instrument rather than using the survey that the City had used in previous years, there were two primary goals: one, to reduce the length of the survey from previous years; two, to create a survey that was more specific to and useful for the City of Minneapolis in its present and future work. Existing items from the 2012 Resident Survey were used to design some of the items on the survey instrument to produce trend data for important City goals.

As part of the survey development process, Wilder Research and NCR staff met with department heads across City government to further refine the survey and ensure that each question would be useful for measuring progress toward City goals. The survey instrument was also reviewed for readability and bilingual Wilder staff who speak Spanish, Somali, and Hmong completed a “cultural review” of the instrument to be sure all of the concepts would make sense and would not be offensive or inappropriate for people from their cultural communities.

The survey was formatted by Wilder Research as an English language survey that residents could fill out themselves on paper. Residents were given the option to take the survey in one of three ways: online by filling out a confidential web survey; via a phone call with Wilder Research in English, Hmong, Somali, or Spanish; or by filling out a hard copy and mailing it in via the enclosed postage paid return envelope. Completed paper surveys were processed by Wilder and entered into the Web survey template for analysis.

Sample

The sample was stratified by the City’s 11 residential communities. To obtain a statistically representative sample of adults for each of the 11 communities, a random sample of 1,000 residential addresses in each community was purchased from a national sampling vendor (Marketing Systems Group of Horsham, PA). Address-based sampling was used so that all households would have an equal chance of being sampled for the survey, regardless of their phone status. Marketing Systems Group (MSG) obtained the list of addresses from the U.S. Postal Service.

Pre-test

In April 2016, before the full survey administration began, a pre-test was conducted to make sure the survey was not too long or difficult to fill out and that residents understood what was

being asked. According to the results from the pre-test, the survey instrument was working properly, had no major problem areas. Therefore, no major changes were made to the survey after the pre-test and prior to fielding the full data collection process.

The pre-test was also used to determine which mode (postcard, note card, or mailed survey packet) would provide the most responses. This was done to plan the best mailing order for the full survey administration. The pre-test was sent to a total of 550 addresses, split evenly by residential community (50 invitations sent per community) and by mode (postcard, note card, and survey packet). Figure 1 below provides an overview of completed surveys by mode and method of completion (surveys completed on the Web vs. on paper). Based on the response to the pre-test, the note card was sent first, followed by a reminder postcard, then a full survey packet.

1. Pre-test: complete totals and response rate by mode

| | Postcard | Note card | Survey packet | Overall |
|----------------------------|----------|-----------|---------------|---------|
| Total sample | 183 | 183 | 184 | 550 |
| Undeliverable ^a | 9 | 7 | 9 | 25 |
| Total eligible | 174 | 176 | 175 | 525 |
| Mail completes | 0 | 0 | 16 | 16 |
| Web completes | 6 | 15 | 6 | 27 |
| All completes | 6 | 15 | 22 | 43 |
| Response rate | 3% | 9% | 13% | 8% |

^a “Undeliverable” mail was returned to Wilder Research by the U.S. Postal Service (for example, the address sampled was vacant).

Data collection protocol

For the full survey, Wilder Research used the following method of survey mailing: an initial note card in a brightly colored envelope was mailed on July 6, 2016 to 11,000 sampled households. The note card included a brief explanation of the survey and a Web link for residents to complete the survey online. Residents were also given the option to call Wilder Research to complete the survey over the phone in English, Hmong, Somali, and Spanish. Seven days after the note cards were mailed, a postcard was sent to all sampled households, reminding those who had not yet completed the survey online to do so and thanking those who had already responded. Approximately two weeks after the reminder postcards were mailed, a full survey packet was mailed to all households that still had not completed a survey. The survey packet included a cover letter, the survey itself, and a postage-paid return envelope. The survey packet also included a Web link to complete the survey online. The remaining completed surveys were received over the next 7 weeks, with the final date for survey receipt being September 9, 2016. All note cards, postcards, and survey packets were addressed to “Minneapolis Resident.”

Outreach

Wilder Research completed additional outreach in communities and among demographic groups that had completed surveys at a lower rate. One month before the end of the survey period, Wilder Research staff called phone numbers (both cell phones and landlines) that were connected to sampled addresses in three communities with fewer completed surveys: Near North, Phillips, and University. These calls were made to encourage residents to complete the survey if they had not already done so. In the final two weeks of the survey period, Wilder Research staff also went in person to sampled addresses in the Phillips community for additional outreach. For all of this outreach, we focused on addresses that were linked to surnames that indicated these residents may be Somali, Latinx, or Hmong. Bilingual Wilder staff completed much of this outreach, to promote additional access to the survey for respondents for whom English is not their first language.

Completed surveys

Completed surveys were received from 2,320 residents of the 11 sampling communities. The overall response rate was 22 percent (2,320 of 10,458 eligible surveys). Community-specific population, sample, and response rates can be found in Figure 2 below.

2. Resident survey sample and respondents by residential community

| Community | Total sample | Undeliverable | Total eligible | Total complete | Response rate |
|--------------|---------------|---------------|----------------|----------------|---------------|
| Calhoun Isle | 1,000 | 62 | 938 | 227 | 24% |
| Camden | 1,000 | 61 | 939 | 188 | 20% |
| Central | 1,000 | 69 | 931 | 191 | 21% |
| Longfellow | 1,000 | 36 | 964 | 294 | 31% |
| Near North | 1,000 | 79 | 921 | 118 | 13% |
| Nokomis | 1,000 | 15 | 985 | 329 | 33% |
| Northeast | 1,000 | 40 | 960 | 227 | 24% |
| Phillips | 1,000 | 49 | 951 | 105 | 11% |
| Powderhorn | 1,000 | 40 | 960 | 210 | 22% |
| Southwest | 1,000 | 29 | 971 | 295 | 30% |
| University | 1,000 | 62 | 938 | 136 | 15% |
| Total | 11,000 | 542 | 10,458 | 2,320 | 22% |

Providing an option to call or fill out the survey on paper in addition to online proved helpful in reaching all of the residential communities in Minneapolis. In some of these communities, the number of submitted paper surveys was greater than the number of completed online surveys. See Figure 3.

3. Resident survey completions by community and type (paper, web)

| Community | Web completes | Paper completes | Total completes |
|--------------|---------------|-----------------|-----------------|
| Calhoun Isle | 136 | 91 | 227 |
| Camden | 88 | 100 | 188 |
| Central | 100 | 91 | 191 |
| Longfellow | 163 | 131 | 294 |
| Near North | 44 | 74 | 118 |
| Nokomis | 184 | 145 | 329 |
| Northeast | 114 | 113 | 227 |
| Phillips | 38 | 67 | 105 |
| Powderhorn | 115 | 95 | 210 |
| Southwest | 170 | 125 | 295 |
| University | 75 | 61 | 136 |

Note. Respondents had two opportunities to fill out the survey online before receiving the paper survey.

Data cleaning and analysis

Wilder Research checked all completed paper surveys as they were returned. After the paper surveys were entered and the paper and web survey data were combined, the survey data were weighted to create reliable estimates of population characteristics for each of the 12 sampling areas: the 11 community districts and the City of Minneapolis as a whole. Weighting also compensates for practical limitations of a sample survey; for example, some demographic groups are less likely to respond to surveys. Weighting reduces the bias of survey estimates by using demographic information about the population being surveyed, in this case the population of the City of Minneapolis and its 11 residential communities.

The weighting process entailed three steps. In the first step, base weights were calculated to reflect the number of adults in each sampled household. In the second step, those base weights were adjusted so that the resulting weights totaled existing data on the total population, based on age, gender, race and ethnicity, housing tenure (home owners vs. renters), and geographic location (planning district). For this study, survey weights were calculated using the method of Iterative Proportional Fitting, which is commonly referred to as Raking. In some cases, some values for demographic questions were missing or incomplete. Missing values were replaced, where possible, by logical inference. A hot-deck imputation procedure was used to assign the remaining missing values. This resulted in 2,320 cases that were eligible to be weighted. The data were weighted against the U.S. Census Bureau's 2010-2014 estimates from the American Community Survey: <http://factfinder2.census.gov/>. In the final step, the adjusted weights were put through a series of quality control checks to detect extreme outliers (to make sure no one respondent counts too strongly in the analysis) and to prevent any errors in calculations or procedures.

Once the data were weighted, the tables in the data book were created to show differences in survey responses across different groups of residents (see the section below for more details). Wilder Research used these tables to write the main report by looking for notable differences between groups and the overall citywide result. Wilder defined a notable difference as one of 10 percentage points or more.

How to use this data book

Each table in this data book represents a question from the survey. For every table in this data book, results are shown for groups of residents from the City of Minneapolis based on:

- Residential community: Calhoun Isle, Camden, Central, Longfellow, Near North, Nokomis, Northeast, Phillips, Powderhorn, Southwest, and University
- Gender: female, male¹
- Age: adults age 18-34, 35-44, 45-54, 55-64, and 65 and older
- Race and ethnicity: African American or African-born; American Indian or Native American; Asian or Asian American; Hispanic, Latino, or Spanish origin (of any race); and White (non-Hispanic)
- Annual household income: less than \$15,000; \$15,000 to \$34,999; \$35,000 to \$49,999; \$50,000 to \$99,999; \$100,000 to \$149,999; and \$150,000 or more
- Housing tenure: renting, owning

The columns in each table represent the response options for each survey question. (See the Appendix for the survey.) For survey questions where residents chose from a pre-determined list of responses, each column shows the percentage of residents who gave each possible response to the question. Some response categories are combined because of the low number of responses in those categories. Some questions were open-ended, meaning that respondents wrote in their own answers instead of choosing from a pre-determined list. For these questions, answers were grouped according to theme. In some cases, respondents provided more than one answer.

The last column always shows the total number of people (unweighted) from each demographic subgroup that responded to this particular question. Some questions apply only to certain types of residents based on their answers to other questions in the survey. Data was suppressed in cases where the row total is less than 20 to protect respondent confidentiality.

¹ The survey also had options for respondents to identify as 'transgender' or 'another way,' but the number of responses for these options was too small to report.

City of Minneapolis Resident Survey
Living in Minneapolis

1. Overall, how do you rate the City of Minneapolis as a place to live?

| | Very good | Good | Fair | Poor | Number of respondents (unweighted) |
|---|------------|------------|-----------|-----------|------------------------------------|
