BACKGROUND AND NOTES ON THE 2006 TABLES FOR YOUTH AND YOUNG ADULTS

These tables provide detailed survey results from the October 2006 *Statewide survey of people without permanent shelter*. The data are provided to help planners and service providers develop summary information about the characteristics of homeless people, their experiences and needs, and the barriers that prevent them from obtaining housing. For an overview of survey results for youth and young adults, see the report *Overview of youth and young adult homelessness in Minnesota 2006: Facts and analysis from the statewide study*. For an overview of findings from the entire study, see the report *Overview of homelessness in Minnesota 2006: Key facts from the statewide survey*. All reports are posted on the Wilder Research web site (wilderresearch.org).

The statewide data tables are based on interviews with 151 youth, ages 11 to 17, and 455 young adults, ages 18 to 21 on October 26, 2006. These young people were interviewed in emergency shelters, battered women's shelters, transitional housing programs, and non-shelter locations.

Based on actual counts of youth and young adults in shelters as well as information obtained in interviews in non-shelter locations, we found 206 youth and 661 young adults on the night of the survey. These young people had a total of 278 children with them. The companion report, *Overview of youth and young adult homelessness in Minnesota 2006, includes estimates of the number of homeless youth and young adults on any given night as well as over the course of a year.*

NOTES FOR INTERPRETING THE DATA TABLES

Tables report frequency distributions for all questions included in the survey, with breakdowns by geographic area (Twin Cities metro area vs. greater Minnesota), **by gender, and by shelter type** (youth shelter programs vs. friends/extended family or other arrangements). The metro region includes the following counties: Anoka, Carver, Dakota, Hennepin, Ramsey, Scott, and Washington. Other housing arrangements include outside, abandoned buildings, temporary paid, exchange, or voucher arrangements.

The data tables are organized by question. Within each question, there are four ways that the data tables display the responses: the first table is for greater Minnesota, the Twin Cities metro area, and statewide for ages 11-17 (by gender); the second table is for greater Minnesota, the Twin Cities metro area, and statewide for ages 18-21 (by gender); the third table is for the metro area, and the fourth table is for greater Minnesota, both of which show further breakdowns by the shelter types of emergency/transitional housing versus friend/family/street/other shelter arrangements (further categorized by age group and gender).

The total number of responses is different for each question, based on the number of valid responses to that question. Missing data (cases when a respondent did not answer a question) are not reported or included in the percentages.

The percentages apply only to the respondents who were qualified to answer that question. Some tables report data that were collected only from those who answered a previous question in a certain way.

For example, many questions about children are asked only of those persons who have children with them, so the percentages apply only to that group.

The tables do not contain data for all homeless youth and young adults in Minnesota. Although efforts were made to interview as many persons as possible, not all homeless young people staying in shelter on October 26, 2006 were interviewed for this study. Based on counts of actual shelter use on survey night, 63 percent of youth and 54 percent of young adults were interviewed. Interviews are only conducted with one person per household and the survey is voluntary. In addition, youth are more likely to be sleeping in temporary arrangements with friends and less likely to be found in shelters. It was not feasible to cover the state to find all homeless young people staying in non-shelter locations. Consequently, this study describes primarily those homeless youth and young adults who are connected in some way to service providers and does not represent all youth and young adults experiencing homelessness on the date of the survey.

Unlike in the adult data tables, these data are not weighted. In the companion adult tables, survey results have been statistically adjusted to reflect the actual adult populations residing in shelters and transitional housing programs (1,783 men and 1,860 women) on the day of the survey. We do not weight the data in the youth and young adult tables. This is because many homeless young people do not use shelter and we do not want to over-represent the backgrounds and experiences of the small proportion of those using shelter during the one-night snapshot.

For questions about the study, please refer to the companion report, *Overview of youth and young adult homelessness in Minnesota 2006: Facts and analysis from the statewide study*, or contact the research staff at homelessstudy@wilder.org.
