HOMELESSNESS IN MINNESOTA A PROFILE OF HOMELESS YOUTH

Final Report from A Statewide Survey Conducted on October 24, 1991

Report Prepared by

Greg Owen, Ph.D. Michelle R. Decker, B.A. June A. Heineman, B.S.

Wilder Research Center 1295 Bandana Boulevard North, Suite 210 St. Paul, Minnesota 55108

ACKNOWLEDGEMENTS

This report is the product of much cooperation. Funding has been provided by the Minnesota Housing Finance Agency, the Family Housing of Fund Minneapolis/St. Paul and the Wilder Foundation. Help to plan and carry out the work was provided by volunteers and staff from the agencies identified above and from the Minnesota Coalition for the Homeless, the Minnesota Department of Jobs and Training, the Minnesota Department of Human Services, the Minnesota Department of Education, the Roundtable on Homeless and Runaway Youth, and the American Indian Task Force on Housing and Homelessness.

Sue Watlov Phillips and Val Baertlein of the Minnesota Coalition for the Homeless encouraged the support of service providers and helped to mobilize the volunteers necessary to conduct the study.

Pat Leary and Julie Urban from the Minnesota Department of Jobs and Training helped us to identify the various sites throughout the state where homeless people could be found.

Commissioner Jim Solem and Patty Beech of the Minnesota Housing Finance Agency helped bring various agencies together to collaborate on the study.

Dave Schultz and Suzanne Guttsen from the Minnesota Department of Human Services consulted on health and service questions.

Kevin Cwayna, Nicholis Dilday, Tom Gray, Kris Kirkbride, Sandee Lester, Mary Jo Meuleners, Panna Putnam, and Barbara Stone helped with the design of the youth survey.

Steve Rice of the St. Paul Housing Information Office provided data on Twin City housing costs.

Gordon Thayer and Sally Auger helped by providing comparative information on homelessness among American Indian people in Minneapolis.

Wilder Research Center staff members Marilyn Conrad, Phil Cooper, Louann Graham, Barb Monsey, Dan Mueller, Scott Parks, and Karen Ulstad contributed to this report, and many other WRC staff served as site leaders and interviewers. Members of the Minnesota Coalition for the Homeless and individuals from many other agencies and voluntary associations served as site leaders, coordinators and interviewers for our survey effort. The statewide survey leaders include: Elaine Anderson, Shirley J. Anderson, Mark Barta, Grace Brown, Yvonne Childs, Joyce Eineichner, Carla Frederick, Mary Huseby, Karen Janov, Mary Jimmerson, Rachel Kincade, Eric Meyer, and Becky Noyes.

The Minnesota Satellite Technology Center provided the facilities and staff for our statewide training efforts. The State Board of Vocational Technical Education contributed time and staff assistance to the project. Minnesota's Technical Colleges provided training space and additional technical support.

None of this would have been possible without the cooperation of more than 1,000 homeless study respondents who answered questions and described their personal experiences in shelters, drop-in centers, streets and other locations. Our report is dedicated to them.

LIST OF INTERVIEWERS

We wish to thank the following people who volunteered their time to help contact and interview homeless youth.

EXECUTIVE SUMMARY

On October 24, 1991 eighty-one of Minnesota's homeless youth agreed to be interviewed as part of a descriptive study of youth without permanent shelter. Youth were identified as homeless and living on their own (unaccompanied by a parent or guardian) by youth outreach workers, health care workers, shelter providers and other human service personnel. The study results presented here are based on survey interviews conducted by volunteers in youth shelters and other locations. The survey effort was directed by Wilder Research Center. The purpose of the Executive Summary is to provide a brief overview of the characteristics of homeless youth who took part in this study.

The findings reported here are based on a purposive sample of homeless youth who were identified with the help of youth serving agencies. The study does not attempt to enumerate all homeless youth. Instead, it provides descriptive information about the background, housing history, education, employment, health, and service use of homeless teenagers who had some contact with service providers and who agreed to participate in this survey. It is not possible to say how well our sample represents the total population of homeless youth in Minnesota.

BACKGROUND CHARACTERISTICS OF HOMELESS YOUTH

Interviews were conducted with 41 boys and 40 girls between the ages of 11 and 18. The average age for the youth surveyed was 16. Forty percent of youth surveyed are persons of color. Twenty percent had not attended school in the last school year. Youth surveyed have histories of life stressing events. Sixty-two percent of youth surveyed had lived in at least one institutional placement outside of the home such as a foster home, correctional facility, or residential treatment facility. Three in ten had been physically <u>and</u> sexually mistreated by an adult. Half had been physically mistreated by an adult. In addition, 13 of the youth surveyed were parents. Of primary concern for these young parents was providing food and clothing for their children, as well as the desire to live together with their families in permanent housing.

HISTORY OF HOUSING AND HOMELESSNESS

Fifty-nine percent of youth had experienced multiple episodes of homelessness. On the day of the survey, half had been homeless "without a permanent place to stay" for more than two months. Even in the past when youth had permanent living arrangements, these arrangements were often unstable; the majority of youth had lived less than three months at their last permanent housing. Major reasons for leaving that housing included difficulty with roommates and paying rent (if they were living on their own), and family problems, particularly conflict with their parents.

EDUCATION AND EMPLOYMENT

Like housed children, most youth (79%) are enrolled in some type of educational program. The difficulty for these youth lies in regular attendance; on the day of the survey, one-third of those students enrolled missed school. Of those youth who were not enrolled in school, the majority felt that the lack of permanent housing was the main barrier to their enrollment. Similarly, lack of a permanent address or phone was given as the primary barrier to gaining employment. Twentyeight percent of the youth surveyed were employed. Their average wage was \$4.50 per hour.

HEALTH ISSUES

Health problems were a concern, especially for the girls surveyed. One-quarter of the youths had concerns about their health. Forty percent of the girls had been pregnant, and 24 percent of the boys had impregnated a female. Three out of ten girls felt they now needed to see a doctor about a health problem. Less than half of all youths surveyed were aware of free health services available to them.

SERVICE USE

Many of the youth surveyed used some services available to them such as food stamps, and free medical services. Nevertheless, the majority felt they needed additional help because they were unable to get needed services on their own. Forty-four percent felt they could benefit by seeing a counselor, case manager or a social worker.

INTRODUCTION

The purpose of this report is to provide a descriptive account of 81 unaccompanied youth who have experienced homelessness in Minnesota. The information is intended as a resource for planners, policy makers, service providers and others who are interested in addressing the problems associated with youth homelessness. This report is intended to supplement a comprehensive statewide report on homeless adults also available from Wilder Research Center.¹ The information in this report comes from a study of 81 youth in Minnesota who were homeless on October 24, 1991. Detailed data tables are presented for all questions asked of youth respondents in the survey.

BACKGROUND

In the summer of 1991, <u>The Roundtable on Homeless and Runaway Youth</u>, a coalition of 120 concerned Twin City individuals and agencies, identified a need for information about street youth. Volunteers from "The Roundtable" encouraged research staff to add a demonstration component that would target homeless teenagers. The purpose of this component was to provide a descriptive profile of homeless and runaway youth in Minnesota. "Roundtable" participants agreed to help adapt the survey instrument for youth respondents and to conduct interviews.

METHODS

Through the resources of youth serving agencies involved in "Roundtable" activities, a number of Twin City metro sites were identified as possible locations for soliciting youth participation in the study. These sites included youth shelters as well as non-shelter locations like drop-in centers, schools, health clinics, and the streets. For greater Minnesota, the Minnesota Department of Jobs and Training helped in identifying shelters designated for unaccompanied youth. Concurrently, volunteers in youth serving agencies in Duluth and Rochester agreed to survey homeless youth staying in non-shelter locations.

Volunteer interviewers were trained by Wilder Research Center staff prior to October 24, 1991. This training included instructions on defining homeless youth, approaching potential respondents, conducting the interview, and paying a cash stipend to participants.

Homelessness in Minnesota: Homeless Adults and Their Children includes information from three sources: a statewide population count of all persons residing in emergency shelters, battered women's shelters and transitional housing facilities on October 24, 1991; a statewide survey of a sample of persons living in these facilities on October 24, 1991; and a survey of homeless adults found in outdoor locations on October 24, 1991. The report is available from Wilder Research Center at a cost of \$15.00.

For the purposes of this study, homeless youth are defined as follows:

Youth who currently have no parental, substitute, foster or institutional home to which they can safely go. They are unaccompanied by an adult and have spent at least one night either in a formal emergency shelter, improvised shelter, or on the streets.²

Interviewers were asked to approach youth who fit this definition. In many cases interviewers knew in advance which youth would be appropriate for the study. Study staff asked interviewers to exclude adolescents who were staying in shelters between institutional placements. Only youth who had no parental, substitute, or institutional home to which they could safely go were eligible for inclusion in the study.

Throughout this report we refer to youth who are unaccompanied by an adult as "homeless." Others would refer to these youth as runaway or homeless interchangeably. We refer to youth as homeless based on terms defined by the National Network of Runaway and Youth Services which states:

Runaways are children and youth who are away from home at least overnight without parental or caretaker permission. Homeless are youth who have no parental, substitute, foster, or institutional home. Often, these youth have left, or have been urged to leave with the full knowledge or approval of legal guardians and have no alternative home.³

Interviewers were successful in surveying 81 youth between the ages of 11 and 18 who were homeless on October 24, 1991. In all, 37 unaccompanied homeless youths were interviewed in shelters and 44 homeless youths were interviewed in non-shelter locations.⁴ Interviews were completed with 49 homeless youth in the Twin Cities and 32 youths in greater Minnesota. The number of interviews completed at each interview site is presented in Appendix 1.

² Youth shelters and out-reach workers normally do not limit their services to "minors" ages 17 and younger as defined by the state. In this study, we included 18 year olds because of the large number of these youth using homeless youth services. Components of this definition are described in <u>Homeless Children and Youth. A New American Dilemma</u>, (ed.) Julee Kryder-Coe, Lester Salamon, and Janice Molner, (New Brunswick, NJ.: Transaction Publishers, 1991) pg. 34-35.

³ National Network of Runaway and Youth Services, Inc., <u>To Whom Do They Belong?</u> (Washington: NNRYS, 1985) pg. 1.

⁴ The 1990 Census enumerated 95 children under 18 staying in emergency shelters for runaway, neglected, or homeless children. Sixty-six percent were female; 52 percent were White, 24 percent were Native American, 22 percent were African American, and 2 percent were Asian. Three percent were of Hispanic origin.

NOT A SURVEY OF ALL HOMELESS YOUTH

This purposive sample of unaccompanied homeless youth does not represent all youth who were homeless in Minnesota on October 24, 1991. In our study, only limited attempts were made to identify and interview those who were not connected to youth serving agencies. It was not feasible to "sweep" the state for homeless youth in non-shelter locations. In addition, no attempt was made to enumerate youths who were doubled up with friends on that night. Consequently, our results are primarily descriptive of homeless youth who are in some way connected to service providers and should not be considered a count of all homeless youth in Minnesota.⁵

PROFILE OF HOMELESS YOUTH

BASIC DEMOGRAPHIC INFORMATION

Youth ranged in age from 11 to 18. The average age of the 41 boys and 40 girls surveyed was 16. Youth surveyed were more likely to be persons of color than the housed population of Minnesota's youth. Forty percent of the homeless youth are persons of color compared to only 9 percent of all Minnesota youth the same age. The following table compares the 1990 Census figures on the racial and ethnic background of Minnesota residents between the ages of 11 and 18 to the characteristics of those in the homeless youth sample.

Racial and Ethnic Background of All Minnesota Youth Compared to Homeless Sample

	<u>White</u>	Black/African <u>American</u>	<u>Hispanic</u>	Native <u>American</u>	Asian/ Pacific Island
U.S. Census Minnesota 1990 (ages 11-18)	91%	3%	1%	2%	3%
Twin City Metro Street Youth (ages 11-18)	44%	33%	4%	13%	6%
Greater Minnesota Street Youth (ages 11-18)	83%	0%	3%	10%	3%

On average, homeless youth in our sample had completed 10th grade in school; and most were enrolled in school on the date of the survey. Only one of the youth surveyed was married; the rest had never been married.

⁵ An enumeration of the number of homeless adults and children staying in adult emergency shelters, transitional housing facilities, battered women's shelter, and detoxification centers can be found in <u>Homelessness in Minnesota:</u> Homeless Adults and Their Children.

CURRENT SLEEPING ARRANGEMENT

Most youth (61%) planned to stay in emergency shelter on the night of the survey. Twentyeight percent planned to stay with friends where they could sleep for free. Seven percent were paying money for a temporary accommodation, and the remaining 3 percent would be sleeping outdoors. Typically, boys had been in their current housing arrangement about five weeks; girls, about three weeks. Of the youth planning to stay in shelters on the night of the survey, one-quarter had lived in shelters for a month or more.

PLACE OF ORIGIN

Nearly three-quarters of the youth had lived most of their lives in Minnesota. The remaining segment grew up in 15 different states and Mexico. Only 15 percent of youth surveyed had lived in Minnesota for two years or less. Among recent arrivals to Minnesota, one of the primary reasons for coming to Minnesota was to live with relatives. Some were sent to live with extended family. Others moved here with their families and became homeless after arriving. Forty-two percent of the youth who had moved to Minnesota within the last two years had lived in Minnesota previously.

RECENT SERVICE USE

Many of the youth surveyed used free or almost free services available to them. In the month prior to the survey, 36 percent used food stamps, 31 percent used free medical or dental services, 31 percent used drop-in centers, 20 percent used a free hot meal program, 14 percent used free mental health services, 12 percent used clothing shelves, 11 percent used food shelves, and 10 percent used W.I.C. Seventy-seven percent of the homeless youth had used at least one of these services in the last month.

HISTORY OF HOMELESSNESS

Fifty-nine percent of youths experienced multiple episodes of homelessness. This is a much higher percentage then the adults surveyed staying in emergency shelters, transitional housing facilities, and battered women's shelters on the same day. Only about 40 percent of the adult population had experienced more than one episode of homelessness. Half of the youth surveyed had been homeless "without a permanent place to stay" for more than two months. Twenty-six percent had been homeless for six months or more and 15 percent had been homeless for at least a year. Seven youths had previously lived in shelters with their parents.

At times during their homelessness, 85 percent of the youth had stayed with a friend. Sixty percent had stayed with a relative. One-third had slept outdoors, in a vacant building or in a hallway.

When they do not have regular housing, youth "usually" stay:

	<u>Girls</u>	Boys	Total
with friends	65%	34%	49%
in shelters	15%	24%	20%
with relatives	17%	17%	17%
outdoors/vacant buildings/car	3%	25%	14%

Boys were more likely to stay outside, in cars, or in shelters on a regular basis, while girls were often able to stay with friends.

INSTITUTIONAL PLACEMENT

Sixty-two percent of homeless youths (71 percent of boys and 53 percent of girls) have a history of some type of placement outside of the home. The table below shows the types of facilities in which homeless youth have lived at some time prior to the survey. Additionally, the table on page 8 compares the 81 youth in our sample to children entering Wilder Foundation residential treatment facilities in 1991. The table on page 10 compares children staying in youth shelters across the United States to youth in our sample. Both tables show some noticeable similarities between our sample of homeless youth and youth living in institutions as well as those living in shelters across the country.

Placement History of Homeless Youth

	<u>Girls</u>	Boys	Total
Foster home	33%	44%	38%
Chemical dependency treatment facility	23%	8%	15%
Residential treatment facility	18%	27%	22%
Detention center/correctional facility	25%	37%	31%
Halfway house	13%	8%	10%
Facility for persons with physical disabilities	8%	2%	5%
Hospital for persons with mental health problems	18%	20%	19%

HOUSING HISTORY

The majority of youth had not lived long at their last permanent housing. Over half had lived there less than three months. Major reasons for leaving their last housing included disagreement or conflict with parents or step-parents, conflicts with people living in their apartment or building (if they were on their own), and rent costs. Nearly half the youth reported being homeless or on the streets prior to this last regular housing arrangement.

EDUCATION

Most youth (79%) are currently enrolled in some type of educational program. Among those under age 18, one respondent had completed high school and one had passed a GED. On the day of the survey, approximately a third of those currently enrolled had missed school. Eight percent of the students enrolled said they did not "usually" attend school. One in five youth did not attend school during the last school year. Twenty-seven percent had attended more than one school during the last school year. Of those who were not enrolled in school, the majority felt that the lack of permanent housing was the main barrier to their enrollment.

EMPLOYMENT AND JOB TRAINING

Twenty-eight percent of the homeless youth (compared to 28 percent of homeless adults) were employed on the day of the statewide survey. Nearly half of the youth with jobs had been working for three months or more. Their average work week was just over 17 hours, and their average wage was \$4.50 per hour. Employment barriers among the 72 percent of homeless youth without jobs included the lack of a permanent address or phone, their age, transportation problems, lack of motivation, and lack of education or job skills. Fifty-seven percent expressed interest in receiving job training at the time of the interview.

INCOME INFORMATION

The primary source of income last year for respondents included: short-term or steady employment for 32 percent, parents for 24 percent, friends or relatives for 14 percent, AFDC for 10 percent, General Assistance or family's public assistance for 9 percent, and other activities including illegal sales and asking for money on the streets for the remaining youths. For the month prior to the survey, 32 percent of the youth reported an income of \$50 or less from all sources, and over half had incomes of \$150 or less.

SERVICE BARRIERS

Although most youth did not report being turned away from services, 52 percent felt they needed additional help since they were unable to get the help they needed on their own. Sixteen percent reported being turned away from food stamps, and 15 percent were turned away from General Assistance. Girls reported a much higher incidence of seeking and being turned away from services than did boys.

YOUTH WITH CHILDREN

Sixteen percent of youth surveyed (N=13) were parents (8 females and 5 males). Of this group, sixty-nine percent were responsible for their children's care (7 females and 2 males). These young parents felt that being able to live together as a family and basic necessities such as food, clothing, housing, and money would most help their children at this time.

PHYSICAL HEALTH

Nearly half (48%) of the unaccompanied youth were aware of free health services available to them. Twenty-six percent had worried about health problems in the preceding three months. Thirty-one percent had received emergency room care in the last six months. Thirty percent of the girls and 7 percent of the boys felt that they now needed to see a doctor about a health problem. Twenty-two percent report some barrier that stops them from getting health care if they need it. Thirty-two percent of those surveyed had been tested for the HIV virus. Nearly nine in ten said they knew about safer sex practices. Forty percent of the females had been pregnant, and 24 percent of the males had impregnated a female.

EMOTIONAL HEALTH

Sixty percent of girls, and 34 percent of boys had been physically mistreated by an adult (47 percent of all youth). Half of the girls and 12 percent of the boys had been sexually mistreated by an adult. Thirty percent of the respondents had been <u>both</u> physically and sexually mistreated.⁶ In the last year, more than one-third of the youth had sought help from a counselor for an emotional or mental health problem. Forty-four percent felt they could now benefit by seeing a counselor, case manager, or a social worker.

Alcohol and chemical abuse was reported by some youth in our sample. One in ten youth reported a current alcohol or drug problem. Fifteen percent had stayed in a detox center or an alcohol or drug treatment facility.

Eight-eight percent of youths surveyed had contact with relatives within the month prior to the survey. Seventy-five percent reported regular contact with three or more close friends.

MAIN NEEDS IDENTIFIED BY RESPONDENT

In addition to housing, youth identify their main needs as a job, money or financial support, school, and food. Health care needs are also significant based on the responses to previous questions.

Interviewers report that most respondents appeared to give reliable and honest answers to the survey questions. Their responses give helpful insight into the lives of homeless teenagers on their own in Minnesota. Homeless youth not identified by youth serving agencies and volunteer interviewers (and therefore not surveyed) may have problems and needs associated with street life that are not necessarily represented in these data.

⁶ Seventy-two of 81 interviews were conducted by mandated reporters. Youth were told that if they mentioned any abuse that had occurred in the past three years, the interviewer was required by law to report it. This may have hindered full reporting on this item.

COMPARISON OF HOMELESS YOUTH SAMPLE TO CHILDREN IN WILDER FOUNDATION OUT-OF-HOME TREATMENT FACILITIES

OUT-OF-HOME TREATMENT FACILITIES

In order to better understand the background characteristics of the 81 homeless youth surveyed, we prepared a comparison group based on admissions of same age youth to residential treatment programs. The data show several noticeable similarities between homeless youth on their own and youth who have been placed in out-of-home treatment facilities. The table below is based on a comparison of homeless youth to a sample of youth ages 11 - 18 placed in Wilder Foundation residential treatment facilities and treatment foster care homes in 1991.⁷

	Homeless Youth Sample (N=81)	Children (ages 11-18) Placed in Wilder Facilities (N=104)
Average (mean) Age	16 years	15 years
Gender: Percent Female	49%	63%
Percent Male	51%	38%
Percent Children of Color	40%	40%
Percent With Problem with Drugs or Alcohol	15%*	33%
Percent Victim of Physical Abuse	47%	55%**
Percent Victim of Sexual Abuse	31%	48%**

* Based on self-reported admission to alcohol or drug treatment facility.

** This abuse was either suspected or documented. Twenty-one percent of the cases were unknown for physical abuse. Thirty percent of the cases were unknown for sexual abuse.

The table suggests that homeless youth may have experienced many of the same physically abusive home situations as those children who are treated in residential treatment programs. Homeless youth, however, appear somewhat less likely than those in treatment to report substance abuse or sexual abuse problems.

⁷ Data are based on historical records and self report collected at intake on all clients entering Wilder Foundation residential treatment facilities. For the purposes of comparison, only those children between the ages of 11 - 18 at intake in calendar year 1991 (N=104) were analyzed.

In addition, we compared previous past out-of-home placement experiences of the homeless youth sample with some of the previous out-of home placement experiences of the children entering Wilder residential facilities in 1991. The results are illustrated in the following graph.

Figure 1

These data suggest a link between institutionalization and homelessness for some adolescents. The profile of institutionalized youth compared to homeless youth shows some noticeable similarities including prior placements in detention centers or correctional facilities, community residential treatment programs and foster homes. Previous mental health admissions, however, occur less often for homeless youth than for those in residential care settings. In contrast to the previous table, homeless youth appear to have more prior experience in alcohol or drug treatment programs despite low self-report of current alcohol or drug problems. The next table compares available data from a nationwide key informant survey of youth shelter providers to similar items contained in the homeless youth sample.

Characteristics	Minnesota Study of Homeless Youth (N=81)	NASW Study of Homeless Youth (N=170)
Average Age of Respondents	16 years	15 years
Percent in Shelters One Month or Longer	24%	48%
Percent With Little or No Means of Support (Income ≥ \$50/month)	32%	37%
Percent With Alcohol or Drug Problems	15% *	19%
Percent Previously in Foster Care	38%	38%
Percent Physically or Sexually Abused	53%	66%
Percent Involved in Correctional System	31%	27%

Comparison of Minnesota Homeless Youth Sample to Results From NASW National Survey of Homeless Youth⁸

* Based on self-reported admission to alcohol or drug treatment facility.

The table shows that the information derived from the two studies is remarkably similar. While the national study shows a higher percentage of youth with shelter stays of one month or longer, all other items in the two studies match up very closely. This suggests that the Minnesota study may, in fact, be a reasonably good descriptive profile of those homeless youth who are connected in some way to shelters or other services.

⁸ Deborah Bass, <u>Helping Vulnerable Youth: Runaway and Homeless Adolescents in the U.S.</u> (Washington, D.C., National Association of Social Workers, 1992). (Sample is based on interviews with 170 shelters nationwide.)

PERSONAL ACCOUNTS

While statistical summaries are essential, they often do not convey the human side of homelessness. The following accounts may be helpful as general examples of the many situations in which homeless youth find themselves.⁹

- Bill is 17 years old. Although he has not yet graduated from high school, he has been homeless and on his own six times. Today, he has been without a permanent place to stay for a month. He is staying temporarily with a friend, but he thinks he will have to move on soon, because he has out-stayed his welcome. Bill grew up in the suburbs of Minneapolis. He left his parents home because he was physically abused by a family member. Bill has been placed in a foster home and in a city shelter. He lived most recently with his brother's family and became homeless again when they could not pay rent. Bill is concerned about finances and is applying for scholarships to study law enforcement.
- Sheri has been on the streets for about a year. She came to the city from a small town in Minnesota because of problems with her family and the need to be on her own. She has no financial or emotional support from her family. She earns money by prostitution and is addicted to crack. Because of her chemical use and lifestyle, she is sometimes on the streets for eight days at a time. Sheri has support from an outreach worker, but she does not yet feel ready to change her lifestyle or get further help. She is surviving.
- Angela has been without permanent shelter for five months. Throughout her teenage years, she was in and out of emergency foster homes due to severe physical and sexual abuse at home. Now she survives by couch hopping, and when she can not find a friend's couch to sleep on, she sleeps in public buildings that stay open late. At this point, she does not trust the "system" enough to get additional services. She lives from day to day. Angela is 16 years old.
- Jenny has grown up spending her time between her two divorced parents' households. Her pattern had been that if she had a conflict with one parent, she would move to the other parent's place. Jenny is 16 years old, and now refuses to live with either parent. She currently stays wherever she can find a place to sleep.
- Since Joe was 11 years old, he has been in and out of the juvenile system. Until recently he wanted to buck the system and enjoy the freedom of the streets. Because he was smart, he could survive this way for extended periods of time. He has been in and out of gangs. Now, at age 18, he wants to go back to school. He is getting help to find a job. Because he has no decent clothing, social service workers are helping him find interview clothes and are teaching him job search skills. He has lived in an apartment on his own for three weeks, but he is homeless again today. He was evicted for being too noisy. He is hoping to try again elsewhere because he now has a taste of what it is like living in a permanent place, and says he is willing to work hard to maintain it.
- Sandy is 15 years old and on the run. She was being abused by her mom's boyfriend and decided to report it. Because of this conflict, her mom put Sandy in a shelter. Counselor's kept telling Sandy that the abuse was not her fault. Nevertheless, Sandy feels she is being punished for reporting it because she can no longer live in her home. Today, Sandy is a runaway and survives by staying with various "guys."

⁹ Note: All names have been changed.

• Jeff had been adjudicated on a felony charge for stealing cars. He received some chemical dependency treatment services, but he just went through the motions to appease his parole officer. He was living in a pickup truck when he hooked up with an outreach worker. The worker helped him apply for GA and a permanent place to stay. After a short time, Jeff took his GA check, and instead of paying his rent, he bought a used car. Jeff ended up being picked up by the police for driving while intoxicated and driving without a license or insurance. He went to jail, and then ended up on the streets again. After more trouble and injuries associated with this drinking, Jeff hit bottom. Today, he has been sober for one month. He is being taught how to read. Jeff's goal now is to finish high school and go to votech or college. After a long struggle, Jeff finally feels hopeful about his future. Jeff is 18 years old.

HOMELESS YOUTH DATA

- 1. Tables in this section contain frequency distributions for each question asked of homeless youth. The numbers are based on actual interviews, and no attempt is made to estimate the characteristics of persons not surveyed.
- 2. The survey results are not necessarily representative of <u>all</u> homeless youth in Minnesota. The sample is purposive. That is, we used outreach workers to find and interview homeless youth in youth serving agencies and in outdoor locations but did not attempt to "sweep" the state and enumerate all youth without permanent shelter. With current funding, the cost of such an effort would have been prohibitive.
- 3. Each table provides breakdowns on two variables. Gender of respondent and geographical area of interview (metropolitan or greater Minnesota). Special analyses of these data can also be provided on an "at cost" basis upon request.
