

SMART Nations

As a 21st Century Community Learning Center, the SMART Nations program served American Indian youth in grades 5-8 after school at Anishinabe Academy, a the American Indian magnet school within Minneapolis Public Schools, and Anne Sullivan Communication Center for 10 years (2007-2017). The program goals were to increase the math scores, school connectedness, and capacity of American Indian youth to become productive adults, and to engage parents in supporting students' learning through culturally relevant afterschool and family activities. The following summary highlights results from the last 5 years of the program in hopes of re-opening the program in the future.

5-year Program Results

(2012-2017 school years)

176 unique participants
over the last 5 years

Average grade
representation per year

Student Performance Improves
by the End of the School Year

Program quality

The Youth Program Quality Assessment (PQA)® was used to assess the quality of youth programs and identify staff training needs. Wilder Research observed SMART Nations each year in November using the YPQA to help staff improve upon program quality.
