

## Long-term homelessness

### Definition of long-term homelessness

For this fact sheet, the term “long-term homeless” includes a person of any age and any family configuration who has been homeless for a year or longer in the current episode, or homeless at least four times in the past three years, and at the time of the interview was staying:

- In an emergency shelter, battered women’s shelter, or in a place not part of any formal shelter program, *or*
- In a transitional housing program, and had a mental illness, substance abuse disorder, or chronic health condition for which they reported they had not received treatment within the past 12 months.

### Total number of long-term homeless in the 2012 statewide study

On the date of the survey, 2,600 adults and unaccompanied minors were identified who were experiencing long-term homelessness. They had 914 children with them, for a total of 3,514 people. This total number includes:

- 2,102 adults who did not have children with them (81% of LTH households)
- 39 unaccompanied minors who did not have children with them (2% of LTH households)
- 459 parents (nearly all adults) who had children with them (18% of LTH households)
- 914 minor children (age 17 or younger) with their parents
- Including all unaccompanied minors and older youth ages 18 through 21, the above groups include 361 youth experiencing long-term homelessness (14% of LTH households)

The tables on the reverse side show the distribution of these individuals between emergency and transitional settings and among planning regions.

### Estimated annual number

Using a simple estimation procedure based on patterns of homelessness of those surveyed, we assume that about twice as many people experience long-term homelessness over the course of a full year as the number on any given night. Thus we estimate that about 7,028 persons experience long-term homelessness in Minnesota in a year, in about 5,200 households.

### The rate of increase in long-term homelessness is slowing

- After steep rises in the numbers of long-term homeless from 2003 to 2009 (over 40% increases in both study cycles), the rate of increase has slowed significantly, growing just under 11% from 2009 to 2012.
- From 2009 to 2012, long-term homelessness increased faster in greater Minnesota (28%) than in the metro region (1%).
- Children with their parents represented the fastest-growing segment of the long-term homeless population today (26% increase from 2009 to 2012).
- After an 8% increase in the number of long-term homeless veterans from 2006 to 2009, the number is back down to the same level again (7% decrease 2009-2012). Veterans are a decreasing share of all those in the long-term homeless population (down from 14% in 2006 and 12% in 2009 to 10% in 2012). However, among all homeless veterans, an increasing proportion are long-term homeless (up from 43% in 2009 to 47% in 2012).

## DISTRIBUTION OF LONG-TERM HOMELESSNESS BY FAMILY TYPE AND SETTING

|   | Adults without children | Unaccompanied minors without children | Parents (of any age) with children | Children with their parents | Total persons | Total households |
|---|-------------------------|---------------------------------------|------------------------------------|-----------------------------|---------------|------------------|
| Emergency or battered women's shelters or unsheltered     | 1,880                   | 37                                    | 334                                | 636                         | 2,887         | 2,251            |
| Transitional housing and with problems not receiving care | 222                     | 2                                     | 125                                | 278                         | 627           | 349              |
| <b>Total</b>  | <b>2,102</b>            | <b>39</b>                             | <b>459</b>                         | <b>914</b>                  | <b>3,514</b>  | <b>2,600</b>     |

### Characteristics of persons experiencing long-term homelessness

Including adults and unaccompanied minors (but not children who were with parents), persons experiencing long-term homelessness have the following characteristics:

- 61% have mental illness
- 26% have a chemical dependency problem (substance abuse or alcohol abuse disorder)
- 19% have dual diagnosis (MI and CD)
- 10% are veterans (16% of adult men)
- 16% are experiencing homelessness as a result of domestic violence (32% of females)
- 56% have a history of prior incarceration (24% within the past two years)

## DISTRIBUTION OF LONG-TERM HOMELESSNESS BY FAMILY TYPE AND REGION

|                         | Adults (18+) without children |             | Unaccompanied minors (<18) without children |             | Parents (of any age) with children |             | Children with their parents |             | Total persons |             | Total households |             |
|-------------------------|-------------------------------|-------------|---|-------------|------------------------------------|-------------|-----------------------------|-------------|---------------|-------------|------------------|-------------|
