INTRODUCTION

In February 2016, Wilder Research was contracted by The Saint Paul Foundation to conduct a survey of residents in Dakota, Ramsey and Washington Counties as a component of their East Metro Community Connectedness Initiative. In addition to the survey, Wilder Research staff from the Minnesota Compass team compiled population-level data, primarily from the U.S. Census Bureau.

This study will be conducted every two years to learn more about East Metro residents' backgrounds, experiences, opinions, and needs in the six areas of community vitality identified by The Saint Paul Foundation: community connectedness, economic opportunity and security, education, health, housing and transportation and human services and family support.

METHODS AND DATA SOURCES

SECONDARY DATA SOURCES

Wilder Research compiled the secondary sources summarizing demographic, economic and social characteristics about the East Metro region. Secondary data were pulled directly from the source, as referenced below, and analyzed by Minnesota Compass staff. The secondary data provided in the East Metro Pulse report can also be accessed at mncompass.org. Below please find the secondary data sources and related notes:

- U.S. Census Bureau, Population Estimates 2014, <http://factfinder.census.gov/>. Population estimates are produced annually in between decennial census years to provide an estimate of the total population. In 2010 and later, the Census Bureau reclassified individuals in the “some other race” category into one of the five standard race categories. This change results in the number “Of Color” being slightly smaller than it otherwise would have been. For data year 1990, “white” refers to race only and may include individuals that identify as white and Hispanic.
- U.S. Census Bureau, American Community Survey (ACS), 2010-2014 five-year estimates and 2015 one-year estimates, <http://factfinder.census.gov/>. ACS estimates are produced annually and provide demographic, economic and social characteristics. Five-year estimates represent averages of data collected over that time period and one-year estimates represent data collected in a single year.
 - *Poverty*: The Census Bureau uses a set dollar value threshold that vary by family size and composition to determine who is in poverty. For a family interviewed in July 2014, the federal poverty level threshold was about \$23,818 for two adults and two minor children. Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories and unrelated individuals under age 15 (including foster children).
 - *Median Household Income*: ACS collects data throughout the year on a monthly basis and asks for a respondent’s income over the “past 12 months.”
 - *Cost-burdened households*: Housing costs for homeowners include payment for mortgages, real estate taxes, various insurances, utilities, fuels, mobile home costs and condominium fees. Housing costs for renters include contract rent plus the estimated average monthly cost of utilities (electricity, gas, water and sewer) and fuels (oil, coal, kerosene, wood, etc.) if these are paid by the renter or on the renter’s behalf. Cost-burdened households exclude households with zero or negative income and those who occupy units where no cash rent is paid.

- *Adults working*: The proportion of adults working is the number of employed, non-institutionalized civilian adults divided by the non-institutionalized civilian population. This proportion will be lower than the employment rate, which is calculated by dividing the number of employed persons by the number of people in the labor force. The labor force is made up of employed and unemployed people who are currently looking for work. It does not include discouraged workers no longer looking or people who have left the labor force for any number of reasons. People are considered to be “working” if they (1) did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were “with a job but not at work,” that is, those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation or other personal reasons.
- U.S. Census Bureau, Small Area Health Insurance Estimates (SAHIE) 2014, <http://www.census.gov/did/www/sahie>. The SAHIE program models health insurance coverage by combining survey data with population estimates and administrative records. The estimates are based on data from the following sources: the Annual Social and Economic Supplement of the Current Population Survey; demographic population estimates; aggregated federal tax returns; participation records for the Supplemental Nutrition Assistance Program, formerly known as the Food Stamp program; County Business Patterns; Medicaid and Children's Health Insurance Program participation records and Census 2000.
- University of Minnesota Accessibility Observatory, Access Across America 2014, <http://access.umn.edu/publications/america>. This data provide accessibility values representing the number of jobs that can be reached from each block, on average, between 7 and 9 a.m.

DEVELOPMENT OF THE SURVEY INSTRUMENT

Wilder Research worked with The Saint Paul Foundation to develop a survey instrument and study design for the East Metro Pulse that answered research questions for the population overall and particular subgroups of interest.

After the key research questions were finalized, Wilder Research drafted a survey instrument to address the research questions and sought feedback from The Saint Paul Foundation to finalize the survey questions. Once the survey was finalized, Wilder Research programmed the survey into its web survey program, Voxco’s Acuity. The Foundation was then given an opportunity to review the web survey in its online format and provide feedback.

Wilder Research pre-tested the survey with a convenience sample of 18 residents of the East Metro using cognitive interviews with a focus on interviewing individuals from the cultural communities of interest (Hmong, Somali and American Indian). During these interviews, Wilder Research staff administered the survey to each pilot test respondent. Based on the results of

these cognitive interviews, Wilder Research identified needed changes to the survey and materials. The Saint Paul Foundation then reviewed and approved these changes before the survey and related materials were finalized. See the appendix for the final survey instrument.

The survey materials included information about how respondents could contact Wilder Research to speak to a trained staff member who could answer questions, complete the survey over the phone, or assist with bilingual survey administration (including language-specific phone lines for Hmong, Somali and Spanish). The survey was translated into Hmong, Somali and Spanish.

SAMPLING RESIDENTS FROM THE EAST METRO

Wilder Research purchased a list of 7,000 randomly sampled of residential addresses from Dakota, Ramsey and Washington Counties. The sample also included a representative subset of addresses from the City of Saint Paul. The list was obtained from a national sampling vendor, Marketing Systems Group.

At least 400 completed surveys were received from for Dakota County, Washington County, and the City of Saint Paul, and 200 from the rest of Ramsey County, which met the targeted number of completed surveys in each area. These quotas were determined by Wilder Research to produce statistically representative data about each of the four areas of interest within a reasonable margin of error. The final sample sizes and margins of errors are shown in the table below.

Sampling area	Number of addresses sampled	Number of completed surveys	Margin of Error (adjusted for weighting)
Dakota County	2,000	404	7.2%
Ramsey County*	3,000	664	6.9%
Saint Paul	2,000	432	8.1%
Washington County	2,000	480	6.5%
East Metro total	7,000	1,548	4.0%

* Data for Ramsey County includes the Saint Paul sample plus an additional sample that included the remainder of Ramsey County outside of Saint Paul. The data were weighted to be statistically representative of Ramsey County overall.

In addition, Wilder Research used convenience sampling and respondent referrals to identify East Metro residents from the following targeted race/ethnic subgroups: 98 Somali, 122 Hmong and 72 American Indian. Important note: This sampling approach does not produce *statistically* representative data about these race/ethnic populations. However, these approaches combined will provide a degree of *practical* significance and information about a range of cultural communities in the East Metro that will be satisfactory and useful for the purposes for which these data are intended.

SURVEY ADMINISTRATION

This survey was administered using a multi-mode approach including an initial survey packet with an invitation letter on The Saint Paul Foundation's letterhead, a survey and a postage-paid return envelope. This initial mailing, sent on July 8, 2016, was followed by a reminder postcard that was sent to all sampled households after one week, on July 15, 2016. These materials directed respondents to the URL for the online survey and included a unique ID number for each respondent to access the survey. After another two weeks, on July 29, 2016, all sampled addresses that had not yet completed the survey were sent a full survey packet that included a similar invitation letter, the survey and a postage-paid return envelope.

During the final mailing and just after, Wilder Research staff completed phone outreach to increase the participation within underrepresented groups. This specifically targeted outreach was based on actual survey responses that had already been obtained from various geographic areas (compared to target number of completed surveys), as well as surname of the respondent.

To thank residents for their time and participation, each respondent was provided with a \$10 gift card. Respondents were offered a choice of both plastic gift cards and e-gift cards to a number of venues.

To complete the convenience sampling and respondent referral methods described above, Wilder Research asked all initial respondents from the population-based sample to refer up to three people they knew who were Hmong, Somali or American Indian. The referrals had to live in the East Metro, but not at the same address as the initial respondent. Wilder Research staff followed up with each referred individuals to let them know that they had been referred, told them a bit about the survey, provided a list of options for taking the survey and invited them to participate.

Wilder Research staff also went to various public locations throughout the East Metro (libraries, community centers, churches and mosques, etc.) and invited people to participate in the survey based on cultural group eligibility (staff were matched to respondents in terms of cultural community and language). Respondents who were approached in public were also be given the \$10 incentive to complete the survey (same options).

DATA ANALYSIS AND REPORTING

Wilder Research checked all completed surveys as they were returned. After the paper surveys were entered and the paper and web survey data were combined, the survey data were weighted to produce reliable estimates of population parameters for each of the four sampling areas: Dakota, Ramsey and Washington counties and the City of Saint Paul. Weighting also compensates for practical limitations of a sample survey, such as differential nonresponse among different demographic groups. By using demographic information about the target population, weighting reduces the bias of survey estimates.

The weighting process entails three steps. The first step consists of the computation of *design* or *base weights* to reflect the number of adults in the sampled household. In the second step, base weights are adjusted so that the resulting weights can aggregate to reported totals for the target population, based on age, gender, education and race/ethnicity. For this study, survey weights were calculated using the method of *Iterative Proportional Fitting*, which is commonly referred to as “*raking*.” Survey data for these demographic questions included some missing values. Missing values were replaced, where feasible, by logical inference. A hot-deck imputation procedure was used to attempt to impute the remaining missing values. This resulted in 1,548 cases eligible to be weighted. The data were weighted against the U.S. Census Bureau, 2010-2014 estimates, American Community Survey: <http://factfinder2.census.gov/>. Finally, adjusted weights are put through a series of quality control checks to detect extreme outliers (weights were truncated so no one respondent counts too strongly in the analysis) and to prevent any computational or procedural errors.

Wilder Research also coded and analyzed the open-ended survey responses. Once the codebook was tested, our internal code-checking process was employed to ensure consistency across the individuals coding completed surveys. The final codebook is included in the appendix. The coded responses are included in the tables in this data book, but the raw open-ended comments from respondents are not included to protect respondent confidentiality (and because there are thousands of comments).

After the data was cleaned, coded and weighted, Wilder Research produced the data tables that are included in this data book. There is a table for every question in the survey, with results broken out by the four geographic areas of interest, as well as the cultural communities of interest.

Wilder Research also worked with The Saint Paul Foundation to conduct additional cross-tabs and other analyses as requested to ensure that all of the key research questions were answered.

HOW TO USE THIS DATA BOOK

For every table in this data book, results are displayed for sub-groups of respondents from each geographic area based on:

- East Metro overall, plus the sub-areas of interest: Dakota County, Ramsey County, including the City of Saint Paul and Washington County
- Gender: females and males – Note: we asked the question about gender in the survey using more inclusive gender categories, but due to the low number of respondents who indicated they are a gender other than female or male, data from these respondents were suppressed in the gender section, although these respondents are included in the overall results
- Age, including adults aged 18-34, 35-44, 45-54, 55-64 and 65+
- Highest level of education including less than high school diploma/GED, high school diploma/GED, some college or associate’s degree and bachelor’s degree or higher
- Annual household income ranges including less than \$20,000, \$20,000-\$39,999, \$40,000-\$59,999, \$60,000-\$79,999, \$80,000-\$99,999, \$100,000-\$149,999 and \$150,000
- Primary language spoken at home, including English or another language
- Race and ethnicity, including Black or African American, Asian or Asian American, Hispanic or Latino/a and White
- Cultural community oversamples – Note: data for American Indian, Hmong and Somali respondents are not statistically representative of these cultural communities because of the way in which they were sampled, so caution should be used when comparing or interpreting these results

The columns in each table correspond to the response options on the survey. Some answer categories are combined because of the low number of responses in those categories. The last column in each row of the table shows the number of respondents (unweighted) related to the percentages in that row. Data is suppressed in rows with a total number of respondents fewer than 20 to protect respondent confidentiality.

Some questions apply only to certain respondents due to skip patterns in the survey. In these cases, the total N in the last column includes only the number of respondents who were asked this question.

Some questions were open-ended, i.e., respondents wrote their own answers on a blank line. The responses to these types of questions were grouped according to theme (i.e., “coded”) in order to

reveal themes in the data. In some cases, respondents were allowed to provide more than one answer. The number of residents in the selected area that the percentages represent can be seen in each table. Where fewer than 10 respondents submitted an answer fitting a particular theme, that theme is grouped with other answers in an “Other” category.

THE SAINT PAUL FOUNDATION

An affiliate of Minnesota Philanthropy Partners

Dear Community Member,

On behalf of The Saint Paul Foundation, I am writing to ask you to participate in the East Metro Pulse survey. The Saint Paul Foundation is a community foundation with 75 years of history investing in improved quality of life in our community. We are conducting the East Metro Pulse survey because we want to hear from you — the residents who make up Dakota, Ramsey and Washington Counties. We want to learn about your experiences in, and connection to, our community. Wilder Research was contracted to conduct this survey.

Your responses will help inform policy makers, funders and local leaders about the opportunities and challenges facing the East Metro. Help us tell the story of your neighborhood!

The survey will take about 15 minutes of your time and can be completed in three different ways:

1. Complete the survey online at:
www.wilderresearch.org/go/EastMetroPulse
Password:
2. Fill out the enclosed paper survey and return it in the postage-paid envelope provided.
3. If you would prefer to complete the survey over the phone, please call Sera Kinoglu from Wilder Research at 651-280-2735. We can help you take the survey.

To thank you for your time, you will receive a \$10 gift card after you complete the survey. You may select from the following options:

- **Amazon.com** or **Target**, received via email, redeemable online and in-store (for Target)
- **Holiday Stationstore** or **Cub Foods**, received as a plastic card via U.S. mail, redeemable in-store

Your household was randomly selected from all households in Dakota, Ramsey and Washington Counties. Your participation is voluntary and confidential. **We want to assure you that your information will not be shared or used for any other purposes.**

We look forward to sharing the survey results in early 2017. For more information about the East Metro Pulse survey, please visit: www.eastmetropulse.org.

Thank you for sharing your story!

Sincerely,

Eric J. Jolly, Ph.D.
President and CEO
The Saint Paul Foundation

The Saint Paul Foundation East Metro Pulse Survey

In this survey, when we say “East Metro” we are referring to The Saint Paul Foundation’s service area, which includes Dakota, Ramsey and Washington Counties.
